EXECUTIVE SUMMARY

Our study set out to develop a practical solution for common urban parking challenges through the creation of the "PARKeasy" parking management system. The identified issues included inefficient use of parking spaces, lack of real-time information for drivers, and the resultant traffic congestion. The primary objectives were to enhance space utilization, provide timely data to drivers, and simplify the overall parking experience. In crafting the system, a detailed plan was laid out in the form of an SQL script, delineating the structure for storing and organizing information about administrators, parking lots, bookings, and related components. This structured approach aimed to ensure seamless communication and coordination within the system.

In the practical implementation of PARKeasy, notable progress was achieved. The system effectively optimized parking space allocation, leading to increased efficiency and a reduction in traffic congestion. Real-time information provision for drivers significantly improved their overall experience. The incorporation of user-friendly interfaces for administrators and members facilitated smooth interactions with the system. Nevertheless, practical challenges surfaced, including the integration of external sensors and the need to encourage widespread adoption among users. To address these challenges, recommendations include comprehensive testing, user education initiatives, continual improvement processes, strategic collaborations, and an emphasis on sustainable practices.

In summary, PARKeasy represents a significant advancement in addressing urban parking challenges. The study underscores the importance of meticulous planning during implementation, user engagement, and a commitment to continuous improvement to ensure the sustained success of PARKeasy in enhancing urban parking management.

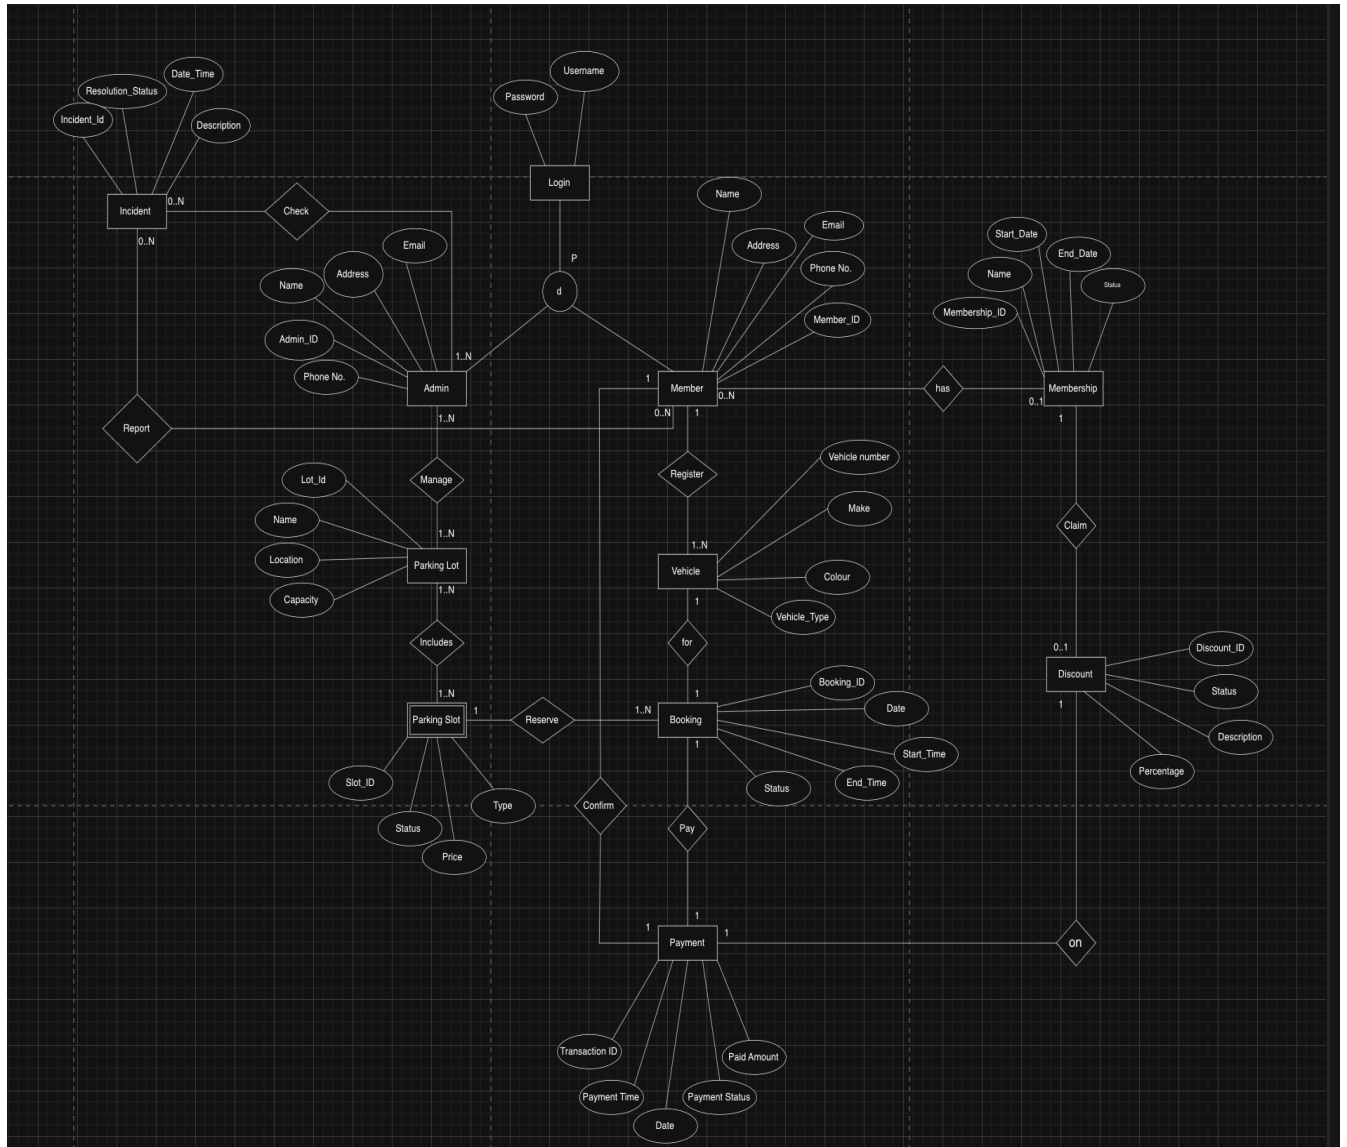

I. INTRODUCTION

In the intricate urban landscape, parking management presents a nexus of challenges, including inefficient space utilization, a lack of real-time information, and the consequential menace of traffic congestion. Enter the "PARKeasy: Parking Management System," a strategic initiative poised to comprehensively address these urban intricacies. At its core, PARKeasy seeks to revolutionize parking dynamics by optimizing the allocation of parking spaces, aiming for a judicious use of resources within parking facilities. This shift holds the promise of alleviating congestion and enhancing overall efficiency in urban parking—an imperative need in bustling city environments.

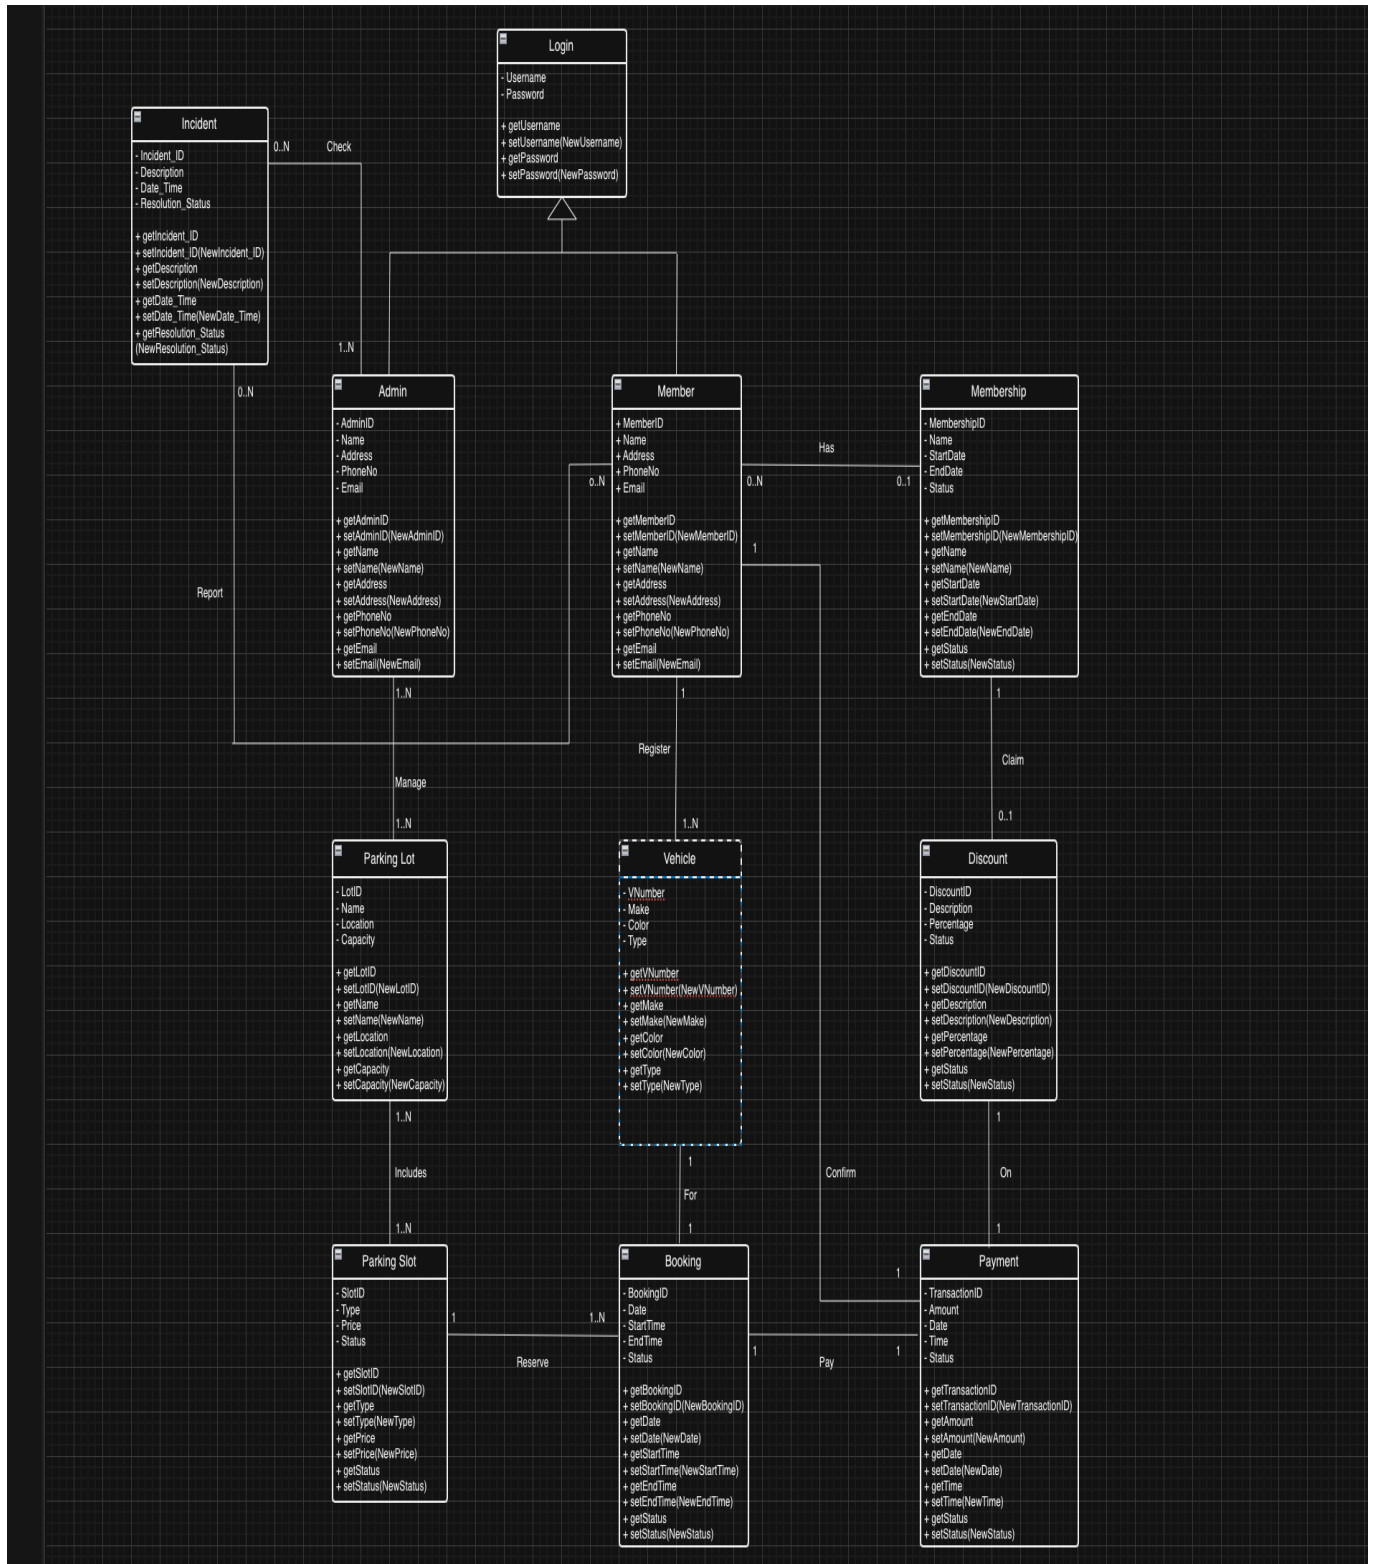

Crucial to PARKeasy's strategy is the provision of real-time information to drivers, addressing the frustration stemming from navigating parking lots without timely data. The system aims to implement a solution that provides accurate, up-to-the-minute information on available parking spaces, not only improving user experience but also significantly reducing the time and fuel spent in the search for suitable parking. This emphasis on real-time accessibility reflects PARKeasy's commitment to making urban parking smarter and more user-friendly.

Driving the operational backbone of PARKeasy is a sophisticated database schema, meticulously outlined in the SQL script. This script intricately weaves together tables for administrators, parking lots, bookings, and their interconnections. These tables form a cohesive structure, ensuring seamless communication between different facets of the system and facilitating efficient parking management. Moreover, PARKeasy recognizes the significance of user interfaces tailored to administrators and members, serving as intuitive portals for real-time data access. Administrators gain a comprehensive overview of parking facilities, while members find an easily navigable platform for making bookings and accessing pertinent information. In conclusion, PARKeasy is not merely a parking management system; it is a transformative force poised to redefine the urban parking experience by systematically addressing inefficiencies, providing real-time information, and fostering sustainable practices—all encapsulated in a sophisticated, three-fold strategy.

IV. IMPLEMENTATION USING MySQL AND NoSQL

MySQL Implementation:

The database was created in MySQL and the following queries were performed:

-- Question 1 : Total Count of Parking Slots by Status:

```
SELECT Status, COUNT(*) as TotalSlots
FROM ParkingSlot
GROUP BY Status;
```

Status	TotalSlots
Available	30
Occupied	30

-- Question 2 : Inner Join (List of Members with their Membership Details):

```
SELECT m.MemberID, m.Name, mb.Name as MembershipName, mb.StartDate, mb.EndDate
FROM Member m
INNER JOIN Membership mb
ON m.MembershipID = mb.MembershipID;
```

MemberID	Name	MembershipName	StartDate	EndDate
1001	John Doe	Silver Membership	2023-01-01	2023-12-31
1002	Jane Smith	Gold Membership	2023-01-01	2023-12-31
1003	Bob Jones	Bronze Membership	2023-01-01	2023-12-31
1004	Susan White	Silver Membership	2023-01-01	2023-12-31

-- Question 8 : Retrieve parking lot information with the average slot price using subqueries ?

```
SELECT
  PL.Name AS ParkingLotName,
  PL.Location,
  PL.Capacity,
  (
    SELECT AVG(PS.Price)
    FROM Includes I
    JOIN ParkingSlot PS ON I.SlotID = PS.SlotID
    WHERE I.LotID = PL.LotID
  ) AS AverageSlotPrice
FROM
  ParkingLot PL;
```

	ParkingLotName	Location	Capacity	AverageSlotPrice	
	Downtown Parking	Main Street	150	10.937500	
	Central Plaza Parking	Center Avenue	200	11.666667	
	Greenfield Park Parking	Park Street	100	10.909091	
	Metro Mall Parking	Shopping Mall	250	11.666667	
	Tech Hub Parking	Innovation Avenue	120	11.363636	
	Riverside Parking	Riverfront Drive	180	11.041667	

NoSQL Implementation:

Question 1 : Identify the admins who have resolved the most number of inspections.

```
db.Incident.aggregate([ { $match: { ResolutionStatus: "Resolved" } },
  { $lookup: { from: "Inspect", localField: "IncidentID", foreignField: "IncidentID",
    as: "inspection_info" } },
  { $unwind: "$inspection_info" }, { $group: { _id: "$inspection_info.AdminID",
    resolvedCount: { $sum: 1 } } }, { $sort: { resolvedCount: -1 } } ])
```

```
< {
  _id: 7,
  resolvedCount: 1
}
{
  _id: 3,
  resolvedCount: 1
}
{
  _id: 45,
  resolvedCount: 1
}
```

Question 2 : Retrieve all incidents, including the handling admin's details and the associated member's booking information.

```
db.Incident.aggregate([ { $lookup: {from: "Inspect",
  localField: "IncidentID",
  foreignField: "IncidentID",as: "inspect_info"  } }, { $unwind: "$inspect_info" },
{ $lookup: {from: "Admin",
  localField: "inspect_info.AdminID", foreignField: "AdminID",
  as: "admin_info"  } },
{ $lookup: {from: "Booking",
  localField: "MemberID",
  foreignField: "MemberID",
  as: "booking_info"}}])
```

```
< {
  _id: 10000042,
  totalPayments: 25,
  membership_info: [
    {
      _id: ObjectId("656b8a96b4dc7880fc5bb207"),
      MembershipID: 10000042,
      Name: 'Bronze Membership',
      StartDate: 2023-01-01T00:00:00.000Z,
      EndDate: 2023-12-31T00:00:00.000Z,
      Status: 'Active',
      DiscountID: 993
    }
  ],
  discount_info: [
    {
      _id: ObjectId("656b89ddb4dc7880fc5bb11b"),
      DiscountID: 993,
      Status: 'Active',
      Description: '20% off',
      Percentage: 20
    }
  ]
}
{
  _id: 10000001,
  totalPayments: 30,
  membership_info: [
    {
      _id: ObjectId("656b8a96b4dc7880fc5bb1de"),
      MembershipID: 10000001,
      Name: 'Silver Membership',
      StartDate: 2023-01-01T00:00:00.000Z,
      EndDate: 2023-12-31T00:00:00.000Z,
      Status: 'Active',
      DiscountID: 991
    }
  ],
  discount_info: [
    {
      _id: ObjectId("656b89ddb4dc7880fc5bb119"),
      DiscountID: 991,
      Status: 'Active',
      Description: '10% off',
      Percentage: 10
    }
  ]
}
```

Question 3 : Compute the average price of parking slots for each parking lot.

```
db.Includes.aggregate([
  { $lookup: {
    from: "ParkingSlot",
    localField: "SlotID",
    foreignField: "SlotID",
    as: "slot_info"  } }, { $unwind: "$slot_info" },
  { $group: {
    _id: "$LotID",
    averagePrice: { $avg: "$slot_info.Price" }
  }
}]
```

```
< {
  _id: 1113,
  averagePrice: 10.909090909090908
}
{
  _id: 1111,
  averagePrice: 10.9375
}
{
  _id: 1112,
  averagePrice: 11.666666666666666
}
{
  _id: 1114,
  averagePrice: 11.666666666666666
}
{
  _id: 1115,
  averagePrice: 11.363636363636363
}
{
  _id: 1116,
  averagePrice: 11.041666666666666
}
```

Question 4 : Fetch Parking Slots with Specific Status.

db.ParkingSlot.find({ Status: "Available" }) // Or "Occupied"

```
< {
  _id: ObjectId("656b8ad2b4dc7880fc5bb218"),
  SlotID: 10001,
  Status: 'Available',
  Price: 10,
  Type: 'Standard'
}
{
  _id: ObjectId("656b8ad2b4dc7880fc5bb219"),
  SlotID: 10002,
  Status: 'Available',
  Price: 12.5,
  Type: 'Premium'
}
{
  _id: ObjectId("656b8ad2b4dc7880fc5bb21c"),
  SlotID: 10005,
  Status: 'Available',
  Price: 10,
  Type: 'Standard'
}
{
  _id: ObjectId("656b8ad2b4dc7880fc5bb21d"),
  SlotID: 10006,
  Status: 'Available',
  Price: 12.5,
  Type: 'Premium'
}
{
  _id: ObjectId("656b8ad2b4dc7880fc5bb21f"),
  SlotID: 10008,
  Status: 'Available',
  Price: 12.5,
  Type: 'Premium'
}
{
  _id: ObjectId("656b8ad2b4dc7880fc5bb222"),
  SlotID: 10201,
  Status: 'Available',
  Price: 10,
  Type: 'Standard'
}
{
  _id: ObjectId("656b8ad2b4dc7880fc5bb224"),
  SlotID: 10203,
  Status: 'Available',
  Price: 10,
  Type: 'Standard'
}
```

V. Database Visualization via Python

1. Visualization to find the number of standard and premium parking slots in each parking lots.

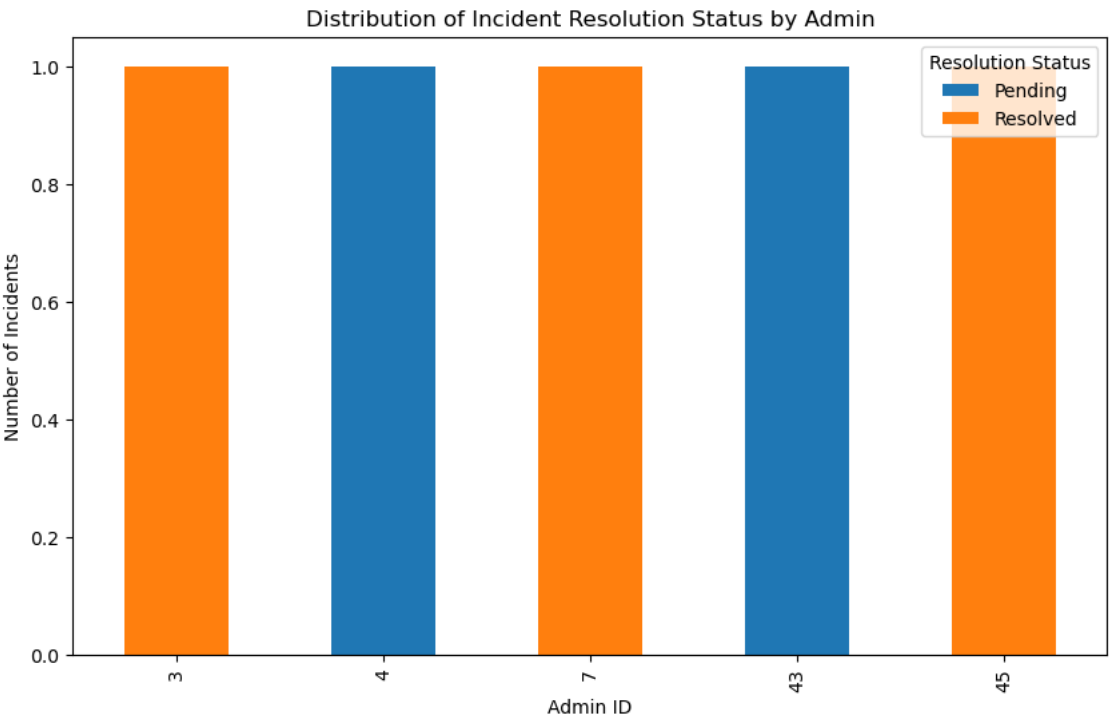

2.To check the availability of the parking slots.

3.Visualization of total amount paid and discounted amount for each member

4.Visualizing the distribution of incident resolution status performed by each admin.

5. Chart to represent the distribution of vehicle types among the bookings.

6. Pie Chart to show Total Revenue Generated by Each Parking Lot.

VI. Summary

The "PARKeasy: Parking Management System" endeavors to tackle urban parking issues by optimizing space utilization, offering real-time information, and reducing traffic congestion. It introduces a comprehensive database structure with tables for administrators, parking lots, and bookings, supported by user-friendly interfaces.

Advantages of PARKeasy include improved space utilization, timely information access for drivers, reduced traffic congestion, cost-effective maintenance, and a positive impact on the environment by diminishing fuel consumption and emissions during parking searches.

However, potential challenges include technical issues during integration with external sensors and the necessity of ensuring broad user adoption. Recommendations for successful implementation involve rigorous testing, user training programs, continuous improvement mechanisms, strategic partnerships, and the incorporation of sustainability measures.

In conclusion, while PARKeasy holds promising solutions for urban parking, careful attention to integration, user engagement, and ongoing enhancements is vital for its effective implementation and long-term success.
